project: syntropy delivered its first flyDome AV system with full dome projection in China

With more than 1,200 movies and TV shows filmed on its premises, Hengdian World Studios is recognized as the largest film studio in the world, covering an area of over 370 hectares, and welcoming 20 million tourists every year.

Hengdian World Studios was looking to add a new innovative attraction to keep its visitors coming and selected project: syntropy to partner on this project. Making use of more than a decade of experience in serious flight training and simulation, project: syntropy developed an entirely new generation of flying theatre experiences: flyDome. “The theatre is a mix between a theme park ride and a cinema,” Christoph Bode, CTO of project: syntropy, explained. “Users are suspended in ride seats in front of a 25m dome screen. The seats then lurch and move as though the users are in the film, creating a fully immersive experience for the user.”

project: syntropy delivered the turnkey fulldome AV solution comprising a 25m fulldome screen, a 16-channel WUXGA 3D stereo projection system with media servers, a domeprojection.com® ProjectionTools autocalibration system, a 20+ multi-channel surround sound system and show control.
